

# GMADE™

## Plan focused instruction directly linked to assessment results.

### **GMADE Resource Library**

#### **Providing a direct link between results and intervention**

This extensive resource library provides teaching activities and worksheets that complement the skill areas covered by *GMADE™* (*Group Mathematics Assessment and Diagnostic Evaluation*).

Available on CD-ROM, the *GMADE Math Resource Library* provides numerous reproducible activities and worksheets to reinforce critical math skills and help establish a direct link from test results to intervention. The nine CDs, one for each *GMADE* level, offer remediation, on-level practice, and enrichment exercises. Each level offers sample worksheets that provide students, small groups, or an entire class opportunities to practice and strengthen their skills.

### **Head for Success Math**

#### **Helping students in Grades 1-5 build a strong foundation of math skills**

*Head for Success* offers lessons with instruction, guided practice, and test practice specifically correlated to the subtest of *GMADE* so students will improve the skills in their areas of need.

Use the *Head for Success* program as part of a comprehensive strategy to support growth in competency by providing practice that targets key math skills. Full lessons supply instruction and practice, which complement worksheets and activities in the *GMADE Math Resource Library*.

## Building Math Success

### Honing skill areas based on the Principles and Standards for School Mathematics

Correlated to *GMADE* and available for Levels K–12, the *Building Math Success* Workbook is designed to provide remediation, on-level practice, and enrichment exercises in three main content areas: Concepts and & Communication, Operations & Computation, and Process & Application.

The workbooks at most levels are designed for independent student work but can be used individually in a group setting to remediate or challenge by further reinforcing skill areas in mathematics identified by NCTM Standards.

For each of the three coverage areas (basic/intermediate/advanced) there are workbooks applicable to a student's level (primary/upper-elementary/secondary).
