Lexile™ Measure

The Lexile Framework® is a tool that allows teachers to match students to specific texts. It defines and sequences books and other reading materials in terms of difficulty and provides a way to link students’ reading achievement to that scale. Because Stanford 10 has been matched to The Lexile Framework, students who take the full-length Reading Comprehension subtest can receive a Lexile measure in addition to scores reported by type of text and reading process. This score identifies each student’s level of reading and provides a means to match students to appropriate reading materials. Information about the use of Lexiles can be found at www.HarcourtLexile.com.

Authentic Reading Selections

Stanford 10 is the only standardized achievement test to provide reading selections written expressly for Stanford 10 by authors of children’s and young people’s literature. These authentic selections create a level playing field for all students, and they include a variety of topics and diverse cultural themes that will appeal to students of varying backgrounds, experiential levels, and interests.
